

APRIL 2020 NEWSLETTER

Changing Times

A lot has changed around here since our last newsletter! Our shop has an all new look! Over the course of a couple of days we went through our inventory and reorganized much of our equipment. We hope that this rearrangement will allow us to work much more efficiently moving forward.

Our shop reorganized to be more efficient while working on the cars.

The largest change of all though has affected everyone—the virus spreading through the country. For us this unfortunately means a few changes. Classes have all been moved online and many of our team members had to move away from campus. We are currently keeping in touch through online communication platforms. Our competition has been moved online to contain only the static events. This has been shocking news throughout the FSAE community, and we are adapting to it as best as we can.

F20 drove with all of the aerodynamics package installed. When we began testing we chose to wait on the wings so that we could focus on other areas of the car. At the end of Spring Break we graduated to having the full aerodynamic package on the vehicle, and although we have yet to gather much data the car looked fantastic going around our test track!

These are not easy times for anyone, but our program looks to the future with great anticipation for all of the opportunities that will be presented to us. We look forward to the next challenge as engineers, and people!
